

# 49. Beacon

## Challenge

The class work collaboratively to position themselves as wide apart as possible, whilst able to throw the ball along the line without it being dropped. Every player must be included: how far can the ball be transported in this manner?

### Tip

Classes that become proficient at this may effectively 'lap' the playground or field.

### Development

How far can the line stretch if players are only allowed to catch with one hand? How fast can the ball be transported along the line?
