# Mrs Santa's teatime surprise

Mrs Santa has made four huge chocolate cakes for tea. She's decided to cut them into equivalent fractions. The elves have to guess the fraction to get a piece. Help them.

$\frac{2}{4} = \underline{\quad}$ $\frac{12}{16} = \underline{\quad}$ $\frac{4}{8} = \underline{\quad}$ $\frac{4}{6} = \underline{\quad}$

$\frac{5}{10} = \underline{\quad}$ $\frac{6}{8} = \underline{\quad}$ $\frac{8}{12} = \underline{\quad}$ $\frac{15}{20} = \underline{\quad}$

$\frac{6}{9} = \underline{\quad}$ $\frac{9}{12} = \underline{\quad}$ $\frac{7}{14} = \underline{\quad}$ $\frac{10}{15} = \underline{\quad}$

What must you add to $\frac{9}{12}$ to make one whole?
