

# Nets

## What you need:

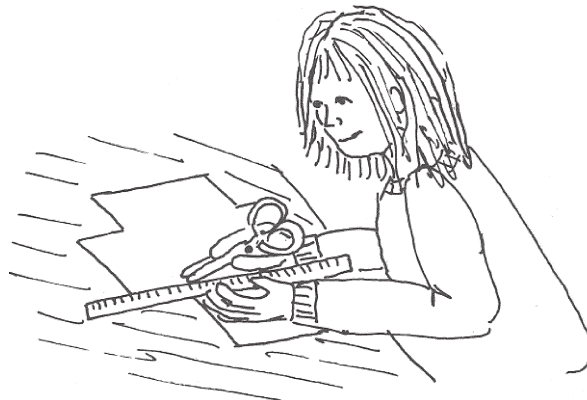

A box that is an interesting shape, stiff paper or cardboard, scissors, and a ruler marked in millimetres.

Make the least number of cuts in the box that are necessary to make it lie flat.

Take careful measurements and draw the net on stiff paper or cardboard. Fold the net and see if you have made a good copy of the first box.

**Tip:** The net will be easier to fold if you score with the back of your scissors along the fold lines first.

## EXTRA!

Design a net for an interesting box to hold six computer disks.
