

# What makes sense?

**Write the word which makes the most sense in each space.**

A praying mantis is a king/kind/link  of stick insect.

It gets its name from the way it holds/hears/horn

its large front legs. It looks as if it is praying. Really it is waiting to

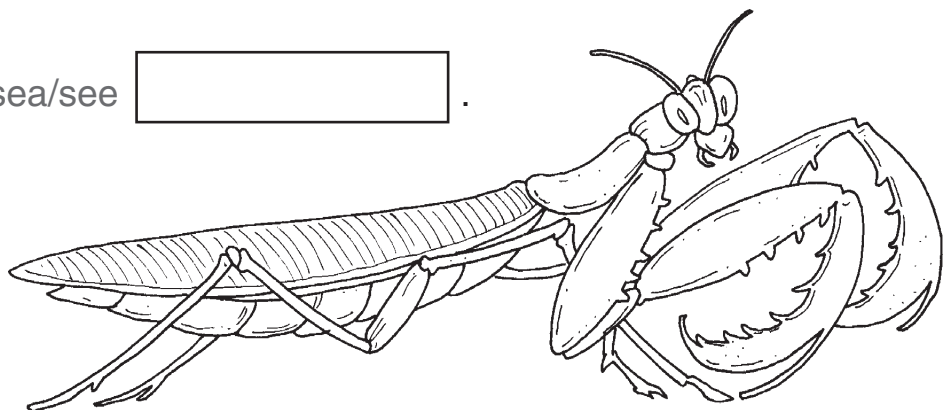

crash/teach/catch  insects. As soon as the

insect gets close/clear/cloud  enough, the legs of

the praying mantis shout/shoot/touch  out to catch it.

The praying mantis hides itself on leaves the same colour as its body so

it is hard to set/sea/see .

## Add-on

Find out more about stick insects from a reference book.
